DETAILED ACTION

Applicant's request for reconsideration of the finality of the rejection of the last Office action is persuasive and, therefore, the finality of that action is withdrawn.

Specification

The specification is objected to as failing to provide proper antecedent basis for the claimed subject matter, "first selecting a plurality of sets of reference data and forming a corresponding plurality of reference model objectsbest suited to the patient." See 37 CFR 1.75(d)(1) and MPEP § 608.01(o). Correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2 and 4 are rejected under 35 U.S.C. 102(b) as being anticipated by Walker et al. (US 4,936,862).

Regarding claims 1, 2 and 4, Walker et al. disclose a "method" of designing and manufacturing individualized prostheses or "implants," including the steps of: generating an average synthesized shape or "virtual three-dimensional" model of a patient's implant area; comparing the virtual three-dimensional model to "real medical reference data" and forming a second synthesized shape or "reference model object" therefrom; and manufacturing an implant from the reference model object utilizing CNC techniques (col. 1, lines 13-20, col. 2, lines 40-68, col. 3, lines 1-11, col. 5, lines 58-67 and col. 6, lines 1-42).

Walker et al. also disclose adjustment of the reference model object prior to synthesizing the implant (col. 6, lines 54-64). It is the Examiner's position that the method steps of forming a plurality of reference model objects and selection of one reference model object is inherent to

any modeling process to ensure optimal fit otherwise the generated reference model object will not fit the patient.

Regarding claim 2, a database is an inherent data storage feature associated with computer-aided design and modeling involving storage and manipulation of large amounts of data.
